

~~Claude Code~~ Team Insights

Why we're building this

THE MISSION

Helps teams think together — capturing what's said, confirming understanding, and connecting the right people.

WHY IT MATTERS

Team dysfunction stays invisible until it's already cost you something. We surface it early.

Built on Lencioni's Five Dysfunctions and Organizational Behavior Management (OBM) Academic Literature — fix trust first, or every layer above it regresses.

What the software does

IN THE MEETING

- ✓ Comes loaded with your company/community and project context
- ✓ Suggests topics to each person based on their actual work
- ✓ Brings in the right expert, by name, at the right moment

AFTER THE MEETING

- ✓ A behavioral report for each participant, across five dimensions
- ✓ Every score backed by concrete signals, not vague impressions
- ✓ Each session builds on the last into a shared reference

Claude as a team member

An AI in the room changes the room, even when silent

1

What people say

Being captured sharpens how people phrase things. It can also make candor harder.

2

Who gets heard

Calling on a quiet person by name shifts the floor away from the loudest voice.

3

What counts as a mistake

Treating gaps as signal rather than failure lowers the cost of admitting one.

4

Who does the thinking

Deferring to a confident answer erodes team judgment. Prompt, never conclude.

Presence is never neutral. The question is which dynamics it strengthens.

Two clocks, two kinds of insight

Neither works alone. The value is running both.

IN THE MOMENT

Actionable, but shallow

Real-time signal - Feedback loops

- Catches things while they can still be changed
- Narrow window — one meeting, limited context
- Can't tell a one-off from a pattern

ACROSS SESSIONS

Nuanced, but retrospective

Longitudinal insight - After-action report

- Sees patterns across meetings and people
- Flags potentially bad days from real, long-term dynamics
- Arrives too late to change this meeting; changes the next

Real time says act now. Over time says what the acting is for.

Where this helps most

The same loop, three different rooms

R

Rural classrooms

TRUST

WHAT IT SEES

A lost student stops asking questions. Nobody wants to look uninformed.

WHAT IT DOES

Prompts a peer to help rather than correct.

I

Knowledge-sharing

CONFLICT

WHAT IT SEES

A contentious point surfaces, then the group quietly moves past it.

WHAT IT DOES

Asks for the case against, drawing in the knowledge-holder.

O

A new hire's first meeting

RESULTS

WHAT IT SEES

The new hire sits through the meeting without being included.

WHAT IT DOES

Nudges a teammate to orient them, by name, right now.
